Dissertations & Theses @Yale – Frequently Asked Questions

Question: ORBIS, YaleLinks, or Articles+ says we have access to this Yale published dissertation. However, when I attempt to connect to the electronic version, I am unable to retrieve full text for this document.

Answer: There are a few reasons why you may be unable to access this content electronically.

1. **ProQuest microfilm scanning.** The full text dissertation content is based on the existing microfilm copies available.
   a. While not all historic dissertations have been microfilmed by ProQuest or its predecessor, University Microfilms, Inc., ProQuest assumes that it has made available all the dissertations published since 1965.
   i. **Caveat:** If something was *never* microfilmed or *excluded* from this process, it may not be available electronically.
   b. A few dissertation titles that predate 1965 are available, but these are rare cases in which Yale sent the content to ProQuest for filming.

2. **Author-placed embargo and restrictions.** Yale is one of the few institutions which allows the author to petition for an embargo or access restriction to their doctoral works.
   a. Embargoes and restrictions may be granted in the following situations (Following text quoted from ProQuest):
      i. Patenable rights in the work or other issues in which disclosure may be detrimental to the rights or interests of the author.
      ii. The ethical need to prevent disclosure of sensitive or classified information about persons, institutions, technologies, etc.
      iii. The interest of an academic or commercial press in acquiring the rights to publish your dissertation or thesis as a book.
      iv. Content that is likely to be submitted to a peer-reviewed journal.
   b. These embargoes can last anywhere from 6 to 12 months. Once this designated time has passed the title should be available electronically. However, until this time has passed, there will be no full text online access.

3. **Metadata errors.**
   a. Occasionally items do not get indexed correctly or are linked incorrectly within the database. This may cause your searches to redirect you to something that doesn’t exist or to the wrong document.
   b. Please feel free to report these incidents to the E-Resources Troubleshooting Group via (e resprob@mailman.yale.edu) or via the Electronic Resources Troubleshooting webform (http://ask-e.library.yale.edu/index.php). We replicate the problem and then forward this information to ProQuest and they can verify and correct this information.

4. **While these dissertations may not be available electronically,** you may want to check if a copy exists on microfilm or as a print copy at Manuscripts and Archives (MSSA) via ORBIS. Please review the following LibGuide on finding and requesting materials from MSSA: http://guides.library.yale.edu/mssa_request.

5. **To get a better understanding of how Dissertations and Theses product works,** please consult the Proquest LibGuide http://proquest.libguides.com/pqdt. While this is geared towards the Dissertations and Theses Global product, it offers tips and strategies that are applicable to the Yale database.
